ADVANTAGE

ABOUT US

Profile

SYMAIR, headquartered in Xi'an, China, with production facilities in Guangdong, is a solutions provider for mobile communication coverage and a manufacturer of related products.

Leveraging over a decade of industry experience, SYMAIR has developed four major solutions: passive DAS, RF feeder cabling, panel antennas, and RF ceramic filters, assisting customers in reducing procurement costs, enhancing network quality, and optimizing profit margins.

Introduction

SYMAIR is customer-oriented and prioritizes product quality, earning the trust and support of an increasing number of domestic and international customers. By optimizing supply chain costs, enhancing delivery speed, and offering flexible cooperation terms, SYMAIR strives to support customers in achieving maximum business value.

50+

Employees

All the employees are experienced and well-trained.

10+

Engineers

Including QC engineers, R&D engineers.

2+

Facilities

For manufacturing of passive components and RF ceramic filters.

5+

Millions

Of overseas trading revenue.

Ceramic
Filters

SYMAIR ainly provides customers with solutions and products including passive DAS, outdoor site material, base station panel antennas and RF ceramic filters. SYMAIR has a factory and warehouse in Dongguan, China, and the factory has passed the ISO9001 quality system certification.

PASSIVE DAS

General

SYMAIR passive DAS (Distributed Antenna System) is mainly used for indoor and outdoor telecommunications operator access, such as mobile signal coverage in shopping malls, office buildings, and high-end hotels. In addition, SYMAIR also offers customized solutions for special outdoor scenarios such as mines, tunnels, and highways.

SYMAIR integrates supply chain resources to provide customers with one-stop solutions, effectively reducing procurement costs and improving procurement efficiency.

Related Products

- RF Coaxial Feeder Cable
- Connector And Adapter
- RF Jumper Cable
- Omni Ceiling Antenna
- Indoor Panel Antenna
- RF Power Splitter
- RF Directional Coupler
- RF Power Tapper
- Hybrid Coupler
- RF Attenuator
- RF Dummy Load
- Point-of-interface (POI)

Customers

SYMAIR's global customers include system integrators, regional agents, telecom operators, and equipment manufacturers. We have long-term customer relationships in Southeast Asia, the Middle East, Japan, and South America.

Scenarios

For the field of mobile communication coverage, especially indoor antenna distribution systems, SYMAIR can provide a complete range of products, including coaxial feeders and connectors, various passive components, indoor antennas, and customized POIs.

Product Categories

For the field of mobile communication coverage, especially indoor antenna distribution systems, SYMAIR can provide a complete range of products, including coaxial feeders and connectors, various passive components, indoor antennas, and customized POIs.

RF Feeder Cables

SYMAIR feeder cables are widely used in RF signal transmission and radiation in mobile communication projects, such as passive DAS deployments.

RF Connectors

A wide variety of RF coaxial connectors exist, which can be categorized into multiple types based on various classification criteria.

Point of Interface

The POI (point-of-interface) allows different networks or systems to work together by establishing standardized connection points.

RF Jumper Cables

SYMAIR uses quality raw cables and verified connectors to ensure the excellent loss, VSWR and PIM performance.

Quality First, Customer First

Product quality is the cornerstone of SYMAIR and the fundamental reason why customers choose SYMAIR. The minimum warranty period can be 2 years after delivery.

Customer requirements are the driving force of SYMAIR's growth. Only when we achieve success for our customers can we achieve success for ourselves.

Passive Components

SYMAIR provides a complete range of passive DAS components including RF power splitters and RF directional Couplers.

RF Loads and Attenuators

SYMAIR offers comprehensive ranges of various power handling and connector interface for RF dummy loads and attenuators.

Indoor Antennas

For indoor DAS deployments, SYMAIR provides omni ceiling and indoor panel antennas supporting MIMO applications, with frequency band up to 6000 MHz.

RF Hybrid Couplers

2×2 and 4×4 hybrid couplers are mainly used for signal input to DAS systems for multi-band and multi-operator.

WHY US —

1 Day

Fast quotation: 1 day for standard products.

2 Weeks

Fast delivery: 2 weeks for standard products.

2 Years

Long warranty: Minimum 2 years.

Factory Supply

Factory supply for high-tech products.

Cost Competitive

Guaranteed best prices on the same quality level.

Flexible Trading Terms

Flexible and reciprocal agency distribution policy.
